

**Fabspeed Motorsports** installed a Kleemann Stage K2 kit on this 2007 Mercedes Benz SL 55AMG. This incredible vehicle arrived stock with 401 RWHP/456 RWTQ, but with Kleemann's performance products aided by Fabspeed's teamwork, this SL 55AMG now boasts 464 RWHP and an astonishing 533 RWTQ. The Kleemann K2 kit features a redesigned pulley wheel with a larger diameter over stock, stainless steel headers and downpipes, and an upgrade in the EMS (Engine Management System).
