Lamborghini Huracan Supersport X-Pipe Valved Exhaust System

SKU: FS.LAM.HUR.SSX

CAUTION

- *Always allow car to cool before performing any installation(s) or service(s) on it.*
- *Always be sure to work on an even and level surface when raising vehicle(s) with a jack, and support all raised vehicles with locked jack stands once elevated.*
- *Fabspeed Motorsport recommends that all installations be supervised or verified by a trained professional technician.*
- *Fabspeed Motorsport is not responsible for any personal injury or damage(s) sustained to a vehicle during installation of aftermarket performance parts.*

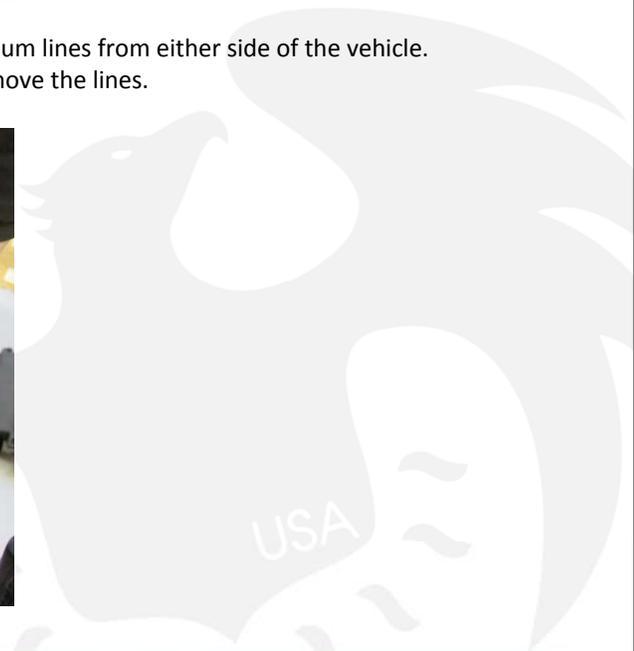

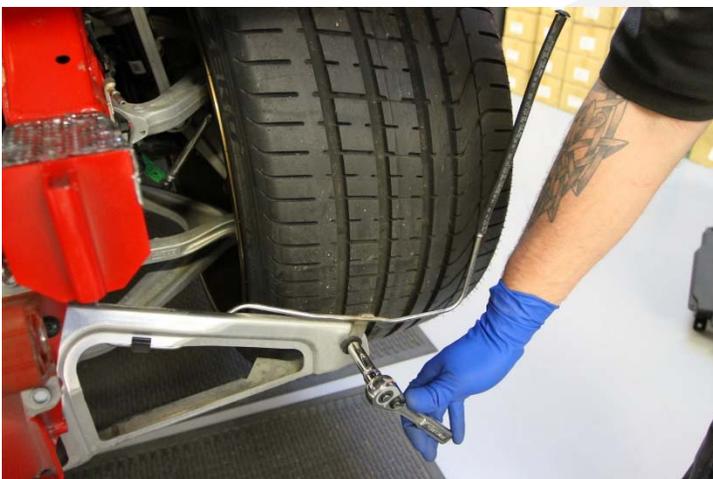

1. Remove rear bumper and factory exhaust from the vehicle. *(If necessary, contact your local Lamborghini dealer for proper removal procedure.)*

2. Remove the rubber vacuum hose section from either side of the vehicle.

3. Using a 10mm socket, remove the bolts securing the factory vacuum lines from either side of the vehicle. Unclips the lines from the inside of the support brackets, and remove the lines.

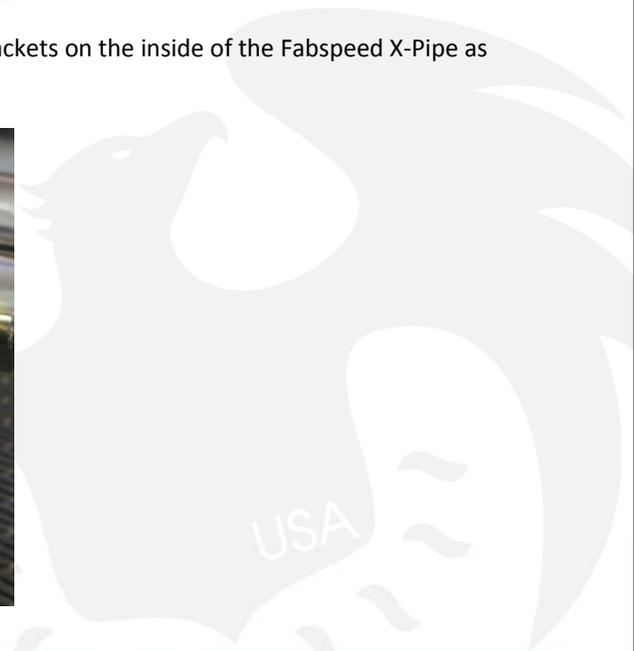

4. Set the inner section of the factory heat shield into the engine bay.

5. Install tail pipe sections on to the Fabspeed X-Pipe. Be sure to face the clamp bolts towards the front of the vehicle to allow access from the wheel well. Do not fully tighten at this time to allow for final adjustments.

6. Using the supplied 13mm bolts and nuts, install the mounting brackets on the inside of the Fabspeed X-Pipe as pictured.

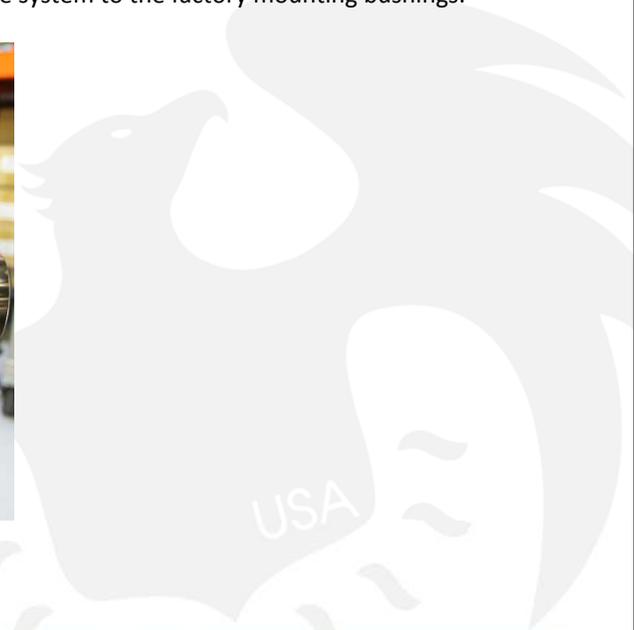

- 7. Set Fabspeed system into engine bay and align front flanges.

- 8. Re-apply factory v-band clamps and tighten.

- 9. Insert and tighten the supplied 16mm bolts and nuts to secure the system to the factory mounting bushings.

10. Re-install rear heat shield section and all remaining factory components to complete installation.

11. **NOTE:** Before re-installing fender liners, position tail pipes and tighten the 15mm Accu-seal clamps to secure in position.
